

1. Write a Python function to find the maximum of three numbers
2. Write a Python program to reverse a string.
3. Write a Python function to check whether a number falls within a given range.
4. Python function that accepts a list as a parameter
5. Write python program that creates a function SwapNumbers() that takes two parameters And outputs the number swapped

The Output should be like this:

Before Swap : 17,24

After swapping: 24,17
